ONE DOES NOT SIMPLY
CODE WITHOUT UNIT TESTS
imgflip.com

Do you find writing test code hard?

We as programmers live in a bubble.

- We think the requirements are constant
- We think the conditions are constant.
- We think the code will not be changed.

Software development is inherently chaotic

In a deterministic nonlinear system, small changes in initial conditions can result in highly divergent and large changes in a later state.

Code

Writing tests should not be hard.
It means your system is flawed and there is code debt.
